

Autorola Solutions supporting Leasing companies all over the world

In close collaboration with Leasing companies all over the world, Autorola has developed a complete fleet system to support managing vehicles in a streamlined and lean manner across organizational units and functions.

A highly customizable range of products specifically designed to improve your in- and de-fleet processes ensuring you a timely and lean flow that makes the process as easy and convenient as possible for all.

Fleet Monitor helps you automate a number of processes, from the monitoring of the incoming fleet to actual return of the vehicles to the sale of your vehicles and cleared funds.

Fleet Monitor works seamlessly with other Autorola integrated systems to support all workflows and processes, from initiating de-fleet services with your suppliers, e.g. receipt of vehicle, end of contract inspection and damage assessment

to market price valuations and sales handling your vehicles in the most attractive market place, whether you choose to sell your vehicle nationally or offer it internationally – our services provide full flexibility from one place!

In short, centrality and 100 pct. transparency in Autorola Solutions systems give you control of the full value-chain while providing flexible options to delegate and build your workflows around your collaboration partners and suppliers.

Why not make it as resource-freeing and hassle-free as possible – while always staying on top of your asset management.

We aim to

Provide you complete customer satisfaction on a very personal level. All Autorola Solution customers are assigned a Project Manager who oversees the entire implementation process - from the initial contact through to handover. Our consultants are dedicated to creating a solution to meet all your individual needs.

Gain full control

Autorola Solutions cover the full process management of your entire fleet – from acquisition to disposal – ensuring you a complete overview across all process steps all the way.

Go lean

With a user-friendly and intuitive look and feel, the system is built around dashboards and worklists,

informing users on which vehicles to take action. This ensures that vehicles are processed quickly and efficiently.

Reach optimum market value

Our inspection tool VIS guarantees high quality end-of-contract inspections and professional presentation of your vehicles for remarketing.

Communicate

Fleet Monitor and Order Monitor allow for efficient and transparent communication with your service providers.

Optimize

Fleet Monitor and Order Monitor optimize your in-fleet and de-fleet activities by decreasing lead-time, protecting residual value and freeing up your internal resources.

Your wins

We add measurable value to your business by providing Solutions in the form of systems and services. Our long-standing capabilities and experience within software and automotive help you gain significant benefits, among others these are:

Cost optimization

- Higher volume of processed units with same resources
- Presell your cars and reduce the time from acquisition to cleared funds
- Proven result: Reduction of lead time with up to 50 pct, from 85 to 34 days. With a cost of € 5-10 per day, total cost savings per vehicle is min. € 255

Process security - zero error processing

- Automated alerts on delays and KPI's
- Full control – all the steps – all the way
- By experience, we estimate that up to 4 pct. of all vehicles are sold lacking information on technical details, costs, documentation etc. This causes costly and organisational heavy doubleprocessing of vehicles

Collaborative platform - Reduce communication barriers

- Include various internal and external stakeholders of the process into one collaborative platform
- Reduce non-value adding time and non-productive middle steps

Traceability - audit 'friendly'

- Every action is logged and can be tracked
- User permission setup
- Compliant to industrial and organizational standards

Customization

- Customize and design your flexible process management system
- Configured to your specific business processes
- Increase transparency and gain valuable insight into developing your business

Your needs – your premises

- Ensure relevancy (the right information at the right time)
- Online and real-time systems
- Integrations to other systems for efficient data exchanges
- No investments in IT infrastructure
- No cost for SW installation in your IT environment
